

SOUTHERN UNIVERSITY AND A&M COLLEGE
SBIO 221LB-12
HUMAN ANATOMY & PHYSIOLOGY I Lab - COURSE SYLLABUS
SUBR Spring 2026
Mode of Instruction: Face-2-Face

Catalog Data (2014 - 2017): HUMAN ANATOMY AND PHYSIOLOGY I Lab (Credit, 1 hour). A course devoted to the study of gross anatomy of the various systems of the body and to present the concepts, principles, and mechanisms associated with maintenance of homeostasis. During this course, the anatomy and physiology of the following systems will be discussed: integumentary system; skeletal system and joints; muscular system; nervous system and special senses; and the endocrine system. This course is designed for students majoring in nursing education, allied health sciences, and nutrition.

Instructor	Professor: Antigone Francis Office Location: 202J – Fisher Hall Office Phone: (225) 771-4586 _____ Office Hours: TBA Email (anytime): antigone.francis@sus.edu (Please include your name, course number & section in the subject line. I will respond within 24 hours, except weekends and holidays.)
-------------------	--

Course Meetings Face-to-face (Thursday, 1:00-3:50 PM)

Course Coordinator Dr. Shervia S Taylor
247 William James Hall (225) 771-3096
Email: shervia_taylor@subr.edu

Required Equipment: You will need to have a desktop or laptop computer with **webcam**. The computer must be compatible with the **Respondus** LockDown browser software, have a browser (Google Chrome), and RELIABLE access to the internet. Additional software can be accessed through the SUBR website. **Chromebooks and Safari Browser are typically not compatible with Respondus. Also, use of iPhones, iPads, and PC tablets during exams is prohibited.**

Required e-Textbook Kyla Ross, Leslie Day, Joseph Comber, Christine M. Eckel, **Laboratory Manual -- Anatomy & Physiology: An Integrative Approach, 4e**. This is a digital package that includes an electronic textbook or e-text, plus McGraw Hill Connect (to complete homework & assignments). The cost of the license is included in the SUBR Student Follett/All Access. However, the access code must be obtained from the SUBR Follett Bookstore or by emailing the SUBR Follett Bookstore manager at 0622txtmgr@follett.com. The first time you employ the McGraw Hill Connect LTIA link from within your Canvas course, you will be prompted to register and use the access code. The use of this package is **MANDATORY**. Technical support is available by calling (800) 331-5094 or by visiting <https://www.mheducation.com/highered/contact/connect-support.html#students>

Required Technology **Canvas:** <https://sus.instructure.edu>. This is Southern University's official learning management system (LMS). You will use this site to access all course materials, (syllabus, e-text, exams, PowerPoint lecture slides, McGraw Hill Connect assignments, etc.). If a student has technical problems with his/her Canvas account, he/she should click on the "Help" topic located in the global (blue) Canvas menu and follow the directions to receive help or click on the web site <https://design.instructure.com/courses/178>. Technical support on canvas is available under canvas resources for students through the website: <https://design.instructure.com/courses/178>

Respondus LockDown Browser + Webcam:

<https://download.respondus.com/lockdown/download.php?id=992735915> Respondus LockDown Browser is a custom browser that locks down the testing environment in Canvas. When students use Respondus LockDown Browser to take a Canvas exam, they are unable to print, copy, go to another URL, access other applications, or close a test until it is submitted for grading. Exams created for use with Respondus LockDown Browser cannot be accessed with standard browsers either. Your computer must be compatible with Respondus and have a webcam and microphone for video monitoring. Respondus is **NOT** supported by Chromebooks or PC tablets. The first time you attempt to take a Canvas exam on your computer, you will be prompted to download Respondus LockDown Browser + Webcam. Alternatively, you may download Respondus Browser by clicking on the link above. Student technical support services are available at the website: <https://web.respondus.com/student-help/>

Optional Technology **Microsoft Office 365:** <http://www.subr.edu/search?q=office+365> As a student of Southern University, you are entitled to a free download of Microsoft Office 365, which includes Word, PowerPoint, Excel, Teams, etc. With **MS Teams**, you will be able to chat/video conference with classmates, instructors, peers, and/or administrators. Click on the link above for information on how to download this invaluable tool.

Lectures **Class** meetings for this class are scheduled Mondays, (2:00-4:50 pm). Lecture videos, notes, and **Microsoft PowerPoint** slides are provided on the Canvas course homepage. Please, review these materials before coming to class.

Course Objectives

1. To understand how the structure (anatomy) of a body part relates to how it works (physiology).
2. To empathize the interrelationships of body organ systems which govern regulatory mechanisms.
3. To comprehend how the body works to maintain homeostasis (balance) and how disturbances in homeostasis lead to pathology.

Course Learning Outcomes

Upon completion of this course, students will be able to:

1. Correlate structure and function for the various organs that compose an organ system.
2. Model the mechanisms of physiological actions to the cellular and molecular levels.
3. Comprehend how integration of organ systems is necessary to the functioning of the organism and to maintaining homeostasis.
4. Understand how dysfunction in organs/organ systems leads to disease/pathology.
5. Be able to recognize symptoms of disease and identify with prevention and treatment strategies.

Administrative Information and Requirements

Course Requirements:

1. Students must purchase and activate their **McGraw Hill Connect** license to complete lab assignments and practicums.
2. Every Mondays (5:00-7:50 pm) you will complete lab activities (in the lab) in-person. All work assigned via **McGraw Hill Connect** work for each week must be completed by the end of each week (Sunday by 11:59 p.m.).
3. **Attendance.** You must attend lab regularly and log into Canvas to complete assigned coursework and to check for course updates. This is necessary for success in this course. Attendance will be taken at the end of each session.
4. **McGraw Hill Connect Assignments.** McGraw Hill Connect will accessed through Canvas by clicking on the “**McGraw Hill Connect**” icon in the course menu. This will take you to the **McGraw Hill Connect** website where you will be prompted to enter your credentials, after which, you will be taken directly to the assignments (& practicum when necessary). At the end of the term, an average lab grade will be calculated (actual points/points x 100), and 20% of these points will count toward the final grade.
5. **Lab Practicums (70% of Final Grade).** 3 Lab Practicums @ 100 points each. At the end of the term, an average practicum grade will be calculated (actual points/points x 100), and 70% of these points will count towards the final grade.
6. **Instructor-determined activities (10% of Final Grade).** These may include attendance monitoring, quizzes, lab reports, etc. At the end of the term, an average activities grade will be calculated (actual points/points x 100), and 10% of these points will count toward the final grade.
7. Students who are candidates for graduation must meet the same requirements as non-candidate students. Candidacy for graduation does **NOT** ensure passage of the course.
8. Students are also expected to read the assigned sections in Visible Body. Such preparation will enhance your ability to learn and understand the vast quantity of material in the course. Students are expected to seek help **EARLY** with any questions or uncertainties they may have about the material covered in this course. I cannot guess when you are confused about the information you are expected to learn.
9. You **MUST** study! This is a rigorous course; therefore, you should spend several hours per week studying this material. In addition, it is advantageous to establish study groups to review material with others. Office hours are available, by appointment, for your benefit. **Do not** postpone getting help until the final weeks of the term, when it is too late for your grade! If you score less than 70% on the first practicum, please seek help immediately!

Examination Information

1. Practicums (exams) will involve identifying/naming components of organs and organ systems. You will also have to answer questions pertaining to the function and workings of organ systems.
2. Students will demonstrate knowledge of the subject through 3 laboratory practicums (100 pts. ea.), and McGraw Hill Connect assignments, & lab activity assignments. Students are allowed 2 attempts at all lab exercises/assignment, and the highest score will be recorded as the student’s grade. Lab practicums may only be attempted once and will **NOT** be cumulative.
3. **There will be no makeup practicums, except under extenuating circumstances.** All practicums and assignments are to be completed during the scheduled time. Also, **no makeup work can be completed after the last day of lab!**
4. All practicums require closed books and closed notes. All practicums/exams (in person/online) will be completed in the lab proctored by the course instructor. There will be **NO** use of resources (books, notes, internet, phones, or other mobile devices) or communications with other individuals while an exam is in progress. If your cell phone is found anywhere in view during an exam, this will be considered cheating and result in a score of **ZERO** for that exam. Students who break these rules are awarded a **ZERO** for the exam. Alternatively, exams may be given in Canvas (but should be completed during class time).
5. Canvas exams (online) will be proctored by the instructor and video monitored using Respondus LockDown Browser + Monitor (webcam) such that all suspicious activity is recorded for later review by the instructor. Students **MUST** remain at the computer for the entire duration of the exam; take care of personal needs **BEFORE** starting an exam. The Lockdown Browser must be open during the exam. You will not be able to access the exam unless this browser is on. Please make sure that your device is compatible with the Lockdown browser. You must download the browser at the beginning of the semester.

6. If any student is found cheating on an exam (as determined by the instructor), the student will receive a **ZERO** for that exam. In addition, further disciplinary action may be taken.
7. Students must **present an official picture ID before taking an exam.** Students lacking an official picture ID will **NOT** be allowed to take the exam.
8. You will **NOT** be allowed to review/print/photocopy online exams. Exam questions are the copyrighted property of the publisher, and as such, cannot be distributed to students to keep.

Grading Distribution

Your final course grade will be based on evaluations for lecture, Instructor determined activities (quizzes, homework, assignments etc.). At the end of the semester, an average grade will first be computed in each category (lecture, Homework). Subsequently, assessments will be weighted as follows:

3 Lab Practicums	70%
Instructor-determined activities	10%
McGraw Hills Connect Assignments	20%

Final grades are assigned objectively and without regard to a student's academic standing or to the requirements of other departments or programs. It is each student's responsibility to see that he or she is safely above any minimum requirements that may apply. **No extra-credit projects to improve a final grade will be allowed!!!**

Grading Scale

A = 90 – 100%
B = 80 – 89%
C = 70 – 79%
D = 60 – 69%
F = Below 60%

INCOMPLETE GRADES – Work that is of passing quality (i.e., must have at least a “C” average) but, because of extenuating circumstances, is not complete, may be graded “I”-Incomplete. Students requesting an incomplete grade **must have completed more than one half of the course**; otherwise, a student may simply withdraw from a course. **Students must initiate an incomplete grade request** and must secure appropriate approval of the excuse by the instructor, department head, and dean of the college in which the course is taken. If an excuse is not received prior to issuing a final grade, the instructor is to consider the delinquent work to be of failing quality and an “I” grade should **NOT** be given. Incomplete grades are removed only by completion of the course work, not by repeating the course. A grade of “I” becomes a grade of “F” if not removed by the end of the first six weeks of the following semester if the student is in residence; or within one year if the student is not in residence. The grade of “I” shall not be calculated in the cumulative grade-point average (GPA) for retention purposes. Graduating seniors are **NOT** permitted to receive “I” grades.

LATE ENROLLMENT - A student enrolling in the course late will be responsible for completing all assignments and exams on time. The academic calendar is published long in advance of the start date for classes. Therefore, students are expected to begin the semester on time to ensure the greatest possible success in their courses.

ACADEMIC DISHONESTY – The University defines academic dishonesty as premeditated and un-premeditated fraudulent behavior. Premeditated fraud is defined as conscious, pre-planned, deliberate cheating with materials prepared in advance. Unpremeditated fraud is defined as cheating without the benefit of materials prepared in advance. See the Southern University and A&M College Catalog for a more detailed definition of academic dishonesty. In addition, administrative regulations governing the conduct of students enrolled at the University are contained in the Code of Student Conduct. A copy of the Code of Student Conduct may be obtained from the Office of the Dean of Students.

ADA COMPLIANCE – Students with documented disabilities who believe that they may need accommodations in this class are encouraged to contact Dr. Jada Netters (jada_netters@subr.edu) in Disability Services [P.O. Box 11298; Baton Rouge, LA 70813; 310 A.C. Blanks Hall; 225-771-3546 (Voice/TTD); 225-771-3949 (Fax)] as soon as possible to ensure that such accommodations are implemented in a timely fashion. Students who need accommodations must be registered with Disability Services. Students are responsible for informing the instructor of any instructional accommodations and/or special learning needs at the beginning of the semester. All discussions will remain confidential.

NOTICE: *The instructor reserves the right to make changes in the syllabus, course content, or instructional techniques in the event it becomes necessary. Written notice of any changes will be given through e-mail and/or Canvas announcements.*

COURSE ASSESSMENT

Course Objectives	Course Learning Outcomes	Methods of Assessment	Target	Relationship to Program Learning Outcomes
1. To understand how the structure (anatomy) of a body part relates to how it works (physiology).	1. Correlate structure and function for the various organs that compose an organ system. 2. Model the mechanisms of physiological actions to the cellular and molecular levels.	Lecture exams, quizzes, laboratory activities & practicums, and Mastering A&P homework assignments	60% of students earn 70% or better	LO1 Knowledge in Biological Sciences LO5 Group Participation and Collaboration LO7 Recognition of Structural and Functional Relationships LO8 Cellular Processes
2. To empathize the interrelationships of body organ systems which govern regulatory mechanisms.	3. Comprehend how integration of organ systems is necessary to the functioning of the organism and to maintaining homeostasis.	Lecture exams, quizzes, lab activities, and Mastering A&P homework assignments	60% of students earn 70% or better	LO1 Knowledge in Biological Sciences LO2 Critical Thinking LO5 Group Participation and Collaboration
3. To comprehend how the body works to maintain homeostasis (balance) and how disturbances in homeostasis lead to pathology.	4. Understand how dysfunction in organs/organ systems leads to disease/pathology. 5. Be able to recognize symptoms of disease and identify with prevention and treatment strategies.	Lecture exams, quizzes, lab activities, and Mastering A&P homework assignments	60% of students earn 70% or better	LO1 Knowledge in Biological Sciences LO2 Critical Thinking LO5 Group Participation and Collaboration LO7 Recognition of Structural and Functional Relationships

TENTATIVE COURSE SCHEDULE *(Subject to change)*

WEEK	DATE	DAY	Labs	Activities & Assignments
1	1/15/26	THUR	Course Introduction	
	1/22/26		Lab Safety	Complete McGraw Hill CONNECT activities & Assignments
	1/29/26		Body Orientation and Anatomy Language	Complete McGraw Hill CONNECT activities & Assignments
2	2/5/26		The Cell and Tissues	Examination of prepared tissue slides using the Microscope; Complete McGraw Hill CONNECT activities & Assignments
3	2/12/26		The Cell and Tissues	Examination of prepared tissue slides using the Microscope; Complete McGraw Hill CONNECT activities & Assignments
4	2/19/26		The Integumentary System	Utilize the skin models to provide visual of the layers and accessory structures; Complete McGraw Hill CONNECT activities & Assignments
5	2/26/26		Practicum 1 (Tissues & Integument)	
6	3/5/26		Skeletal System: Bone Structure and Function	Examination of prepared bone tissue slides using the Microscope; Complete McGraw Hill CONNECT activities & Assignments
7	3/12/26		Axial Skeleton	Utilize the skeletal models; Articulated and Disarticulated; Complete McGraw Hill CONNECT activities & Assignments
8	3/19/26		Appendicular Skeleton and Articulations (Joints)	Utilize the skeletal models; Articulated and Disarticulated; Complete McGraw Hill CONNECT activities & Assignments

9	3/26/26	THUR	Anatomy & Organization; Gross Anatomy of Muscular System; Axial and Appendicular Muscles	Utilize models and videos; Complete McGraw Hill CONNECT activities & Assignments
10	4/2/26		Skeletal Muscle Physiology	Utilize iWork kit to measure electrical activity of skeletal muscles (Electromyography = EMG); Complete McGraw Hill CONNECT activities & Assignments
11	4/9/26		Practicum 2 (Bones, Muscles and Joints)	
12	4/16/26		Gross Anatomy of the Brain & Cranial Nerves; Electroencephalography (EEG)	Utilize brain models & examination of structure of the brain (microscope) to study Gross anatomy; use iWork Kit to measure brain activity (electroencephalography); Complete McGraw Hill CONNECT activities & Assignments
13	4/23/26		The Spinal Cord and Spinal Nerves; The Autonomic Nervous System; Human Reflex Physiology The Senses	Utilize models of spinal cord, examination of structure of nerves using a microscope; Complete McGraw Hill CONNECT activities & Assignments. Complete of McGraw Hill Lab activities and Assignments
14	4/30/26		Practicum 3 (Nervous System and Senses)
